
WINTER IS COMING. ARE YOU READY?

WINTER DOESN'T WAIT, NEITHER SHOULD YOU

If you own or operate a truck with a diesel engine, it's time to start gearing up for the change in weather, and there's more to winterizing than tires and chains.

Reliable truck performance during the winter season starts with equipping yourself with the safety and reliability of a Cummins engine and Cummins Genuine New & ReCon® Parts. But this is just the beginning – when Mother Nature shows up with her worst, you need to defend with the best. This means a solid winter preparation and maintenance program.

We have prepared some simple tips and product offers that can make winter preparation of your vehicle a little less frigid.

TIPS FOR COLD-WEATHER OPERATION

- Add a coolant heater if operating where temperature drops below 11°F (-12 °C).
- Add a winter front in temperatures below freezing.
- Use winterized fuel and add a diesel fuel supplement. For proper mixture, consult your owner's manual.
- Verify that all coolant lines and connections are leak free.
- Test your battery regularly and clean battery connection points.
- Check the cold cranking capacity of your battery and consider a battery warmer if operating in extreme cold.
